MULTICROP VALVE™

The Flexifinger® Multicrop valve™ quickly and easily converts a drill from a mono crop to a multicrop seeding unit and back again.

Flexifinger® **FXA**

www.flexifinger.com

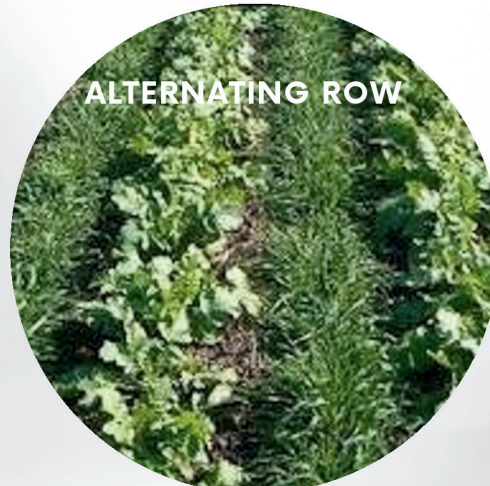

This innovative technology converts a standard 1" pneumatic mono crop air drill hose configuration to intercropped seeding with either twin or alternating row spacing.

Supporting air packages, metering systems and air cart tanks must be available to fully implement the technology.

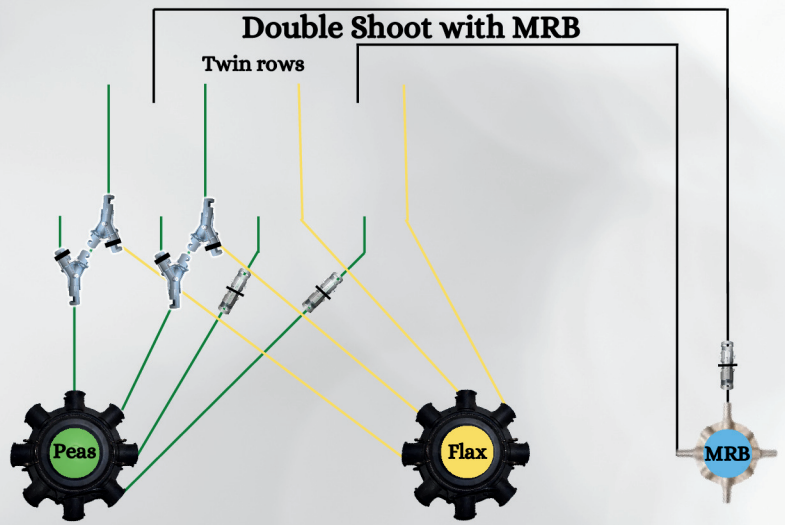

TWIN ROW

ALTERNATING ROW

**NEW
PRODUCT**

MULTICROP VALVE™

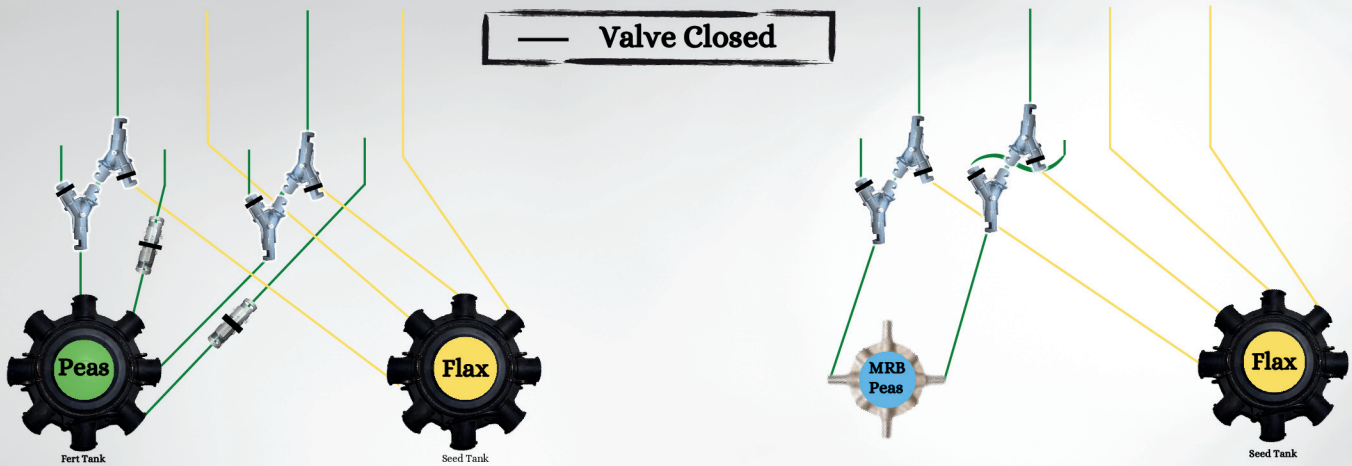

Double Shoot

Single Shoot with MRB

Alternating rows

Twin rows

The paired inlets of the MultiCrop Valve™ have sliding gates that select the alternate flow to the opener (No tools required).

Intercropping of two different crop types in various row configurations such as alternate or twin row is now available.
